### Production Reflective Essay

My role at the Nueva production Sent was building the set. My individual responsibilities working on set was building Seth scene it consisted of getting a desk, designing a logo and adding three monitors on desk, building a wall an attaching a couch to Jason's scene, I was also responsible of all the tools being used I had to make sure they were put away at right place before leaving.

A challenge I faced during this production was working with limited tools, materials and time, it made the work twice as hard because everything had limitation. Constructing made it really hard because we were not able to used tools to cut and the people in charge of cutting were not there most of the time because they were working on something else or were busy trying to finish their responsibilities we had to leave everything there until Chavis or Tyler were back and had time to cut a piece of wood because we were prohibit of using cutting tools and the would take time away because we would have to find another task.

My personal growth experienced through this production has being gaining the ability of communicating asking questions, working as a team and having detailed ideas. For Seth scene Sandra and I printed the Youtube logo and changed it to Sethtube creating a vizualize idea of what we were trying to create and took a picture of the desk we were going to work with to make it easier for the directors to visualize our idea. Our set group

was a really collaborated group all of us helped each other and we did not only focus on our responsibilities we were helping each other with ideas and building. I helped build and paint the pageant, kitchen, and break up scene.

Set helped me develop the skills of multi-tasking, communicating and collaborating. This skills would transfer as a job because jobs are design for people work together having had the opportunity to really use this skills makes it easier for me on a job because now I have gained the ability to know how to work as a team combining ideas. When building Jason's sense Ganzler, Chavis, Sandra and I had to worked as a team and come up with an idea to attach the couch to a piece of wood the had already wheels attach we try everyones idea until we figure out how the couch would stay attach.

I believe the I did a great job in this production and the I would have had a raise if I was on a job because I put a lot of work and though on everything I did. I discover on this production and the last one from last year the lam good working with tools I never knew I had the ability to built pieces of set the come just from ideas I am really glad I got this opportunity because I have enjoy this a lot.
